

Integrity Assessment Pipeline Group

The new ranges of inflatable collars are much thinner and 25% of the weight of our previous release. For example a 6” collar which weighed 3kg is now $\frac{3}{4}$ kg. Furthermore the new modular tools will be used for pipe diameters down to 3”. A further design advantage of the new collars is that they store flat, and not coiled as previous. In addition the associated steel bands are 50% lighter than previous. All equipment is fully backward compatible.
